

**Parts needed to mount the STEP extrusion**

Extrusion (A)

End cap (B)

LED strip (C)

Anti-slip  
rubber strip (D)

Cover (E)

**Tools needed for mounting:**

- drill
- screwdriver

**NOTE!** All LED strips must be connected to a 12 V or 24 V power supply.

**1.** Drill holes in the extrusion (A). At least two to mount the extrusion and at least one to run the power cable.

**2.** Attach the LED strips (C) and lead out the power cable. Next mount the extrusion (A) to the step with suitable screws.

**3.** Insert anti-slip rubber strips (D) into the extrusion. To do this, stretch the strip slightly or use a slippery substance. **NOTE:** After inserting the strip in the extrusion do not cut the excess length! It will slowly spring back to its former length.

**4.** Mount the cover (E) and connect the LED strips to the power supply.

**5.** Insert the end cap (B)
